

Meeting Magic: Technical Data Sheet

Meeting Magic Enterprise is hosted in the WAN network and is being used over HTTP protocol by the users to search rooms/view/book the meetings. Optional integrated display systems allow displaying the scheduled meetings.

Meeting Magic Professional allows booking of meetings in exchange server public calendar or local outlook calendar to book the meetings and display systems integrated to display the meeting details.

Features:

Meeting Magic **Administrator** can set the default rights for the user. Administrator can assign additional user rights to individual users.

Active Directory (AD) Integration and Synchronization is an optional feature provided for

- a. Single sign on using NT authentication of AD users supported.
- b. No user creation hassles for Meeting Magic. New AD user gets default rights set by administrator.
- c. Internal attendees can be searched and picked up from AD.

Exchange Server Integration optionally can be integrated with Meeting Magic to update the Public calendars allocated for the meeting rooms.

Meeting room display based on the Streme framework, enables the user to display current meeting details (in progress) and upcoming meetings details integrated with various multimedia content and tickers. When no meetings next scheduled meeting will be displayed along with other internal information user/ Administrator wanted to display.

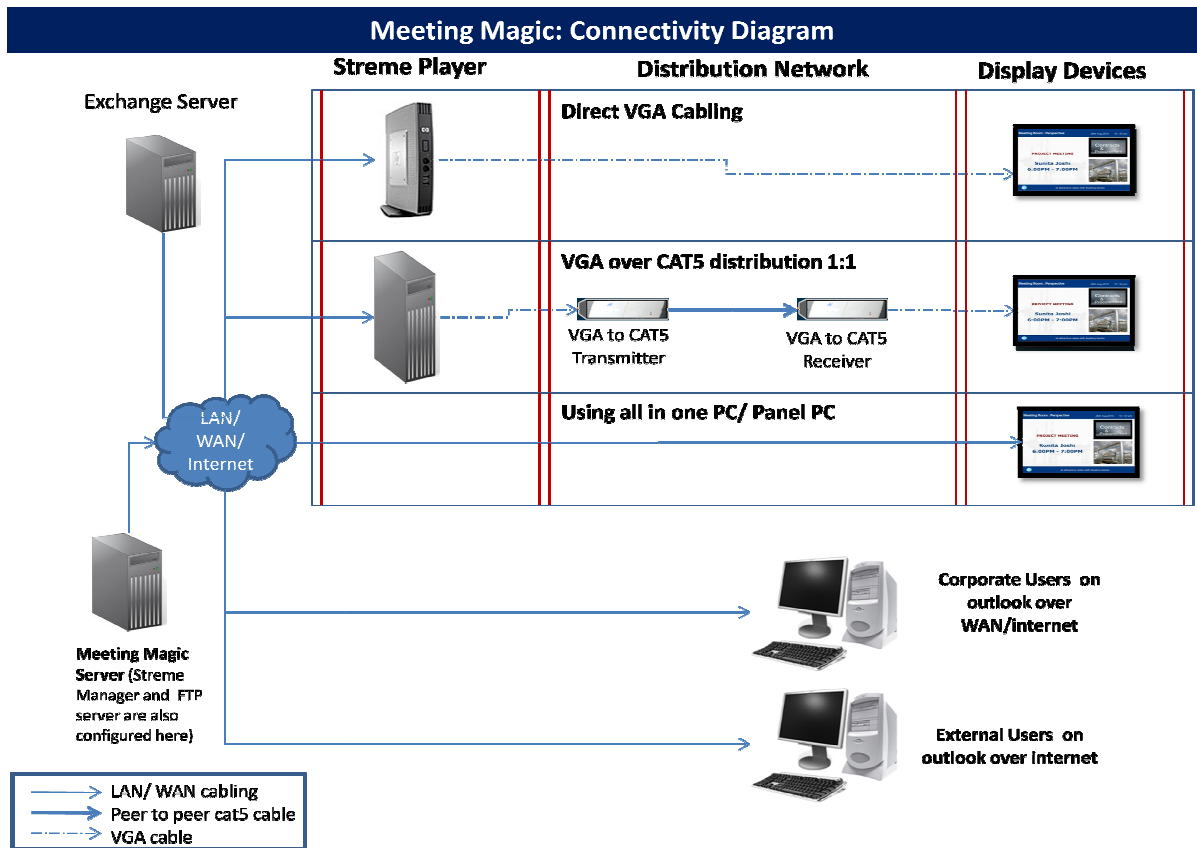

Outlook Integration: Meeting Magic sends meeting requests automatically to all the attendees and the host. It enables Outlook to update local calendars of host attendees (both internal and external).

Meeting Room Selection: Meeting rooms can be searched based on the capacity, type and availability of other resources.

Display Options: Meeting Magic Display supports 8", 10", 15", 17", 19", etc with TC/PC h/w or integrated PC.
