Panic Mode for Camera display with evacuation information.

iDASH takes the inherent competitive spirit to new levels by sharing performance information transparently. A highly motivated, competitive team makes you a winner in the marketplace.

Driving the competitive spirit

It is human to be competitive. When performance data is displayed, it is even more human to compete harder. When you have your people putting in their best, it is only a matter of time when the company comes out a winner in the marketplace.

Transparent Management view

iDASH keeps your eyes on the business all the time, everytime. iDASH is placed at strategic locations in the organization like common areas and senior management cabins. To keep confidential information from prying eyes, teams use codes that make sense only to their team

Operating in a real world

With its transparent real world information management capabilities, iDASH makes sure the team is facing real information coming from real world. Taking proactive decisions quickly is a given.

Putting key users in control

The task of creating and managing information is assigned to key employees, at supervisor, junior, middle managers etc. This keeps the information responsibility decentralized, making people responsible for individual and department performance.

Feel Secure

iDASH Integrates with leading CCTV brands, Digital Video Recorders and IP Cameras to provide a seamless view. You can now view business information along with camera footage live in your business and work areas. A special panic mode that can be invoked across the premises switches the display to an emergency evacuation mode, assisting in timely action avoiding damage to property and life.

Proven Platform

iDASH is built as part of Streme's Digital Signage framework. Streme is a market leader for Digital Signage solutions in India with over 2000 screens deployed across multiple businesses, cities locations for diverse

Simple administration

The system is very simple to manage and implement across divisions in a company. A very user friendly manager software does not require any multimedia expertise.

Embedded technology

iDASH is built using Embedded technology. It offers unparalleled reliability, lower costs of ownership and flexibility. A simple plug and play, on and off operation ensures ease of use and easy upgradeability.

i DASH

Workplace dashboards for winning teams

Picture in Picture

The screen is divided into multiple windows. Each window showing a different content or application. Usually layouts are prepared in 4-5 content windows like scrollers, TV channel, excel sheets etc to give one unified view to management.

Dashboard integration

Most corporate dashboards need the user to login and see one option after the other. With a unique integration method for automated interaction, you can now see each dashboard for say 10 seconds. No changes to your dashboard software are needed and no complex programming required.

Application integration

iDASH has a provision to integrate web intranet applications. An embedded browser window opens a specific URL. This feature is ideal for integrating corporate dashboards quickly with iDASH.

Excel integration

Excel is the most popular flexible business graphing and data management tool available for business users. iDASH provides a feature for integrating multiple excel files with multiple excel sheets. Sheets in excel files are shown one after another in a sequence. Data integration in Excel happens with user entered data or data sourced from a data repository using Macros.

Animated Graphs from live data

Organizations generate data from transactions summaries in xml formats, excel sheets, web services and more. Animated graphs that show real time data bring life into the display by catching attention

Switching on triggers

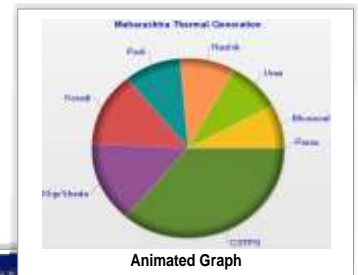

On a set precondition, you can now switch to a layout that draws immediate attention. E.g. A power station the template is showing the temperature forecast and power generation requirements. On sensing a trip at a power generation facility, the display immediately switches to show critical parameters of the particular power station. On a set time duration, the layout changes to the previous display.

Multimedia components

iDASH rides on the proven Streme Digital Signage Framework. This facilitates integration of multi media components like images, flash files, movie files, scrollers, static text and many more. More than 150 formats are supported. A detailed content guideline means your in house team or creative agency can start content production on day one.

Full Screen TV Mode

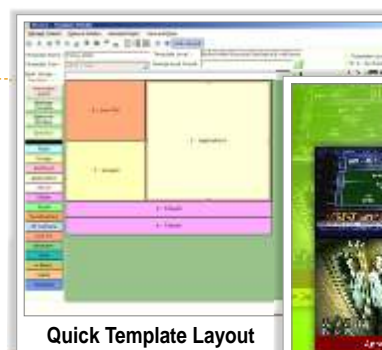

With one click on the custom remote control. You can switch the display to a full screen TV mode. Now watch your favorite business channels on TV. You can switch back the picture in picture mode with a click on the remote control again.
